Genomic overview of SARS-CoV-2 in Denmark

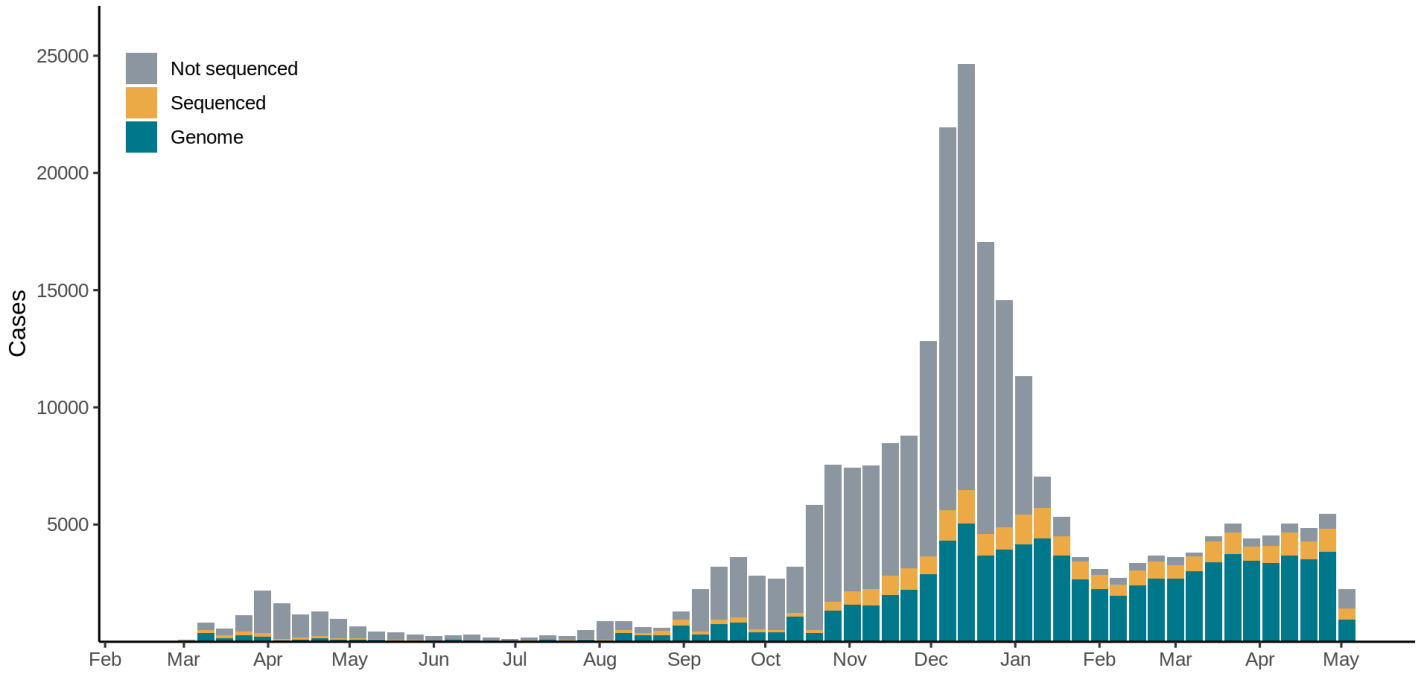
Danish Covid-19 Genome Consortium
Updated 2021-05-08

Data included on this page covers the period from 2020-02-26 to 2021-05-05 and may not be updated according to newest official numbers from Statens Serum Institut. Regional placement reflects where a person has official address, not necessarily where that person was infected. The data may also be subject to change.

Sequencing coverage

The plot below shows the number of cases with positive SARS-CoV-2 test, summarized per week (total height) for whole of Denmark and each region separately. Each bar is split into cases not sequenced (grey), sequenced cases that did not produce a genome of sufficient quality (yellow) and sequenced cases with a good quality genome (blue). A table with all numbers is located at the bottom of this page.

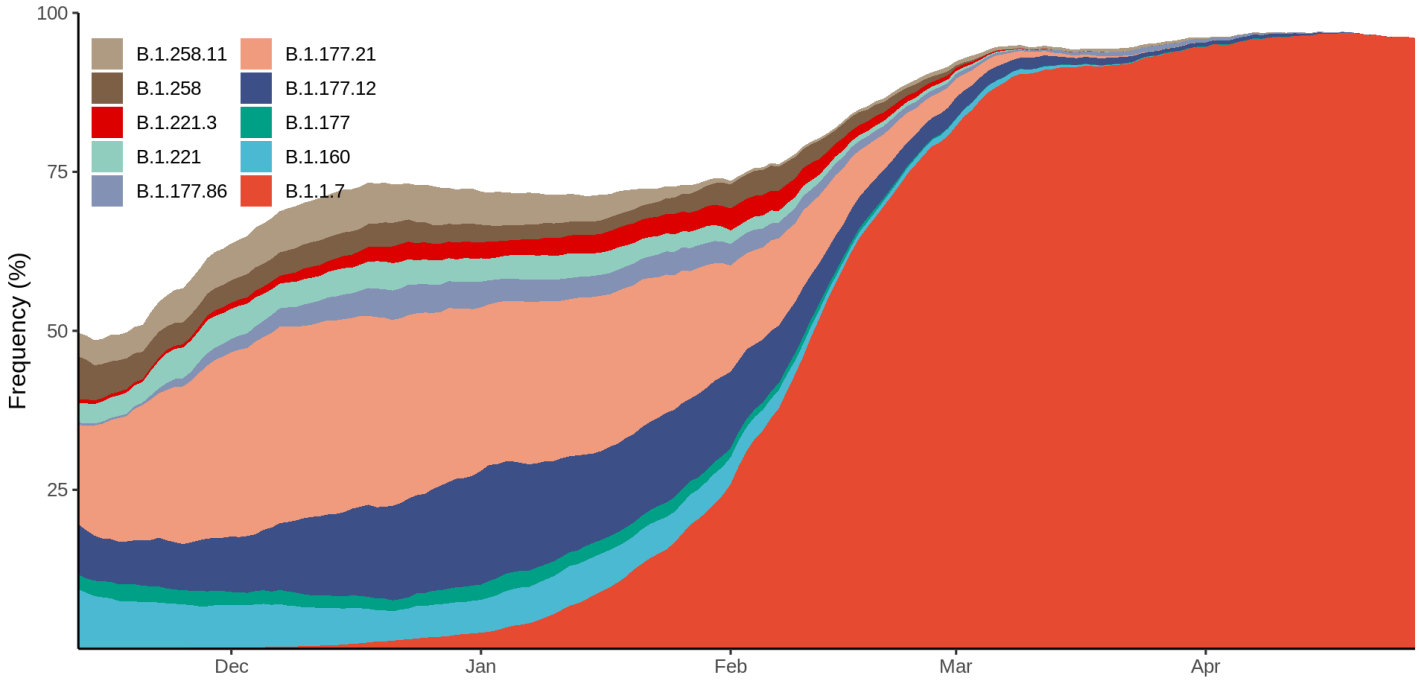
Whole Denmark Hovedstaden Midtjylland Nordjylland Sjælland Syddanmark



Dominating lineages

Frequency of the 10 most abundant PANGO lineages (https://cov-lineages.org/) across Denmark within the last 6 months. The frequency is calculated as a centered 14-day rolling average. Note that some regions have low case-counts in some periods, which can make small absolute changes look dramatic on a relative scale.

Whole Denmark Hovedstaden Midtjylland Nordjylland Sjælland Syddanmark



Lineages and mutations of interest

The plots below show the number of cases with a specific lineage or mutation of interest per week (only last 16 weeks shown) out of the total number of cases with a genome in paranthesis below. Top pane shows for all of Denmark, then for each Region. For international context on lineages and other interesting mutations see covariants.org (https://covariants.org/), cov-lineages.org (https://cov-lineages.org/) or outbreak.info (https://outbreak.info/situation-reports).

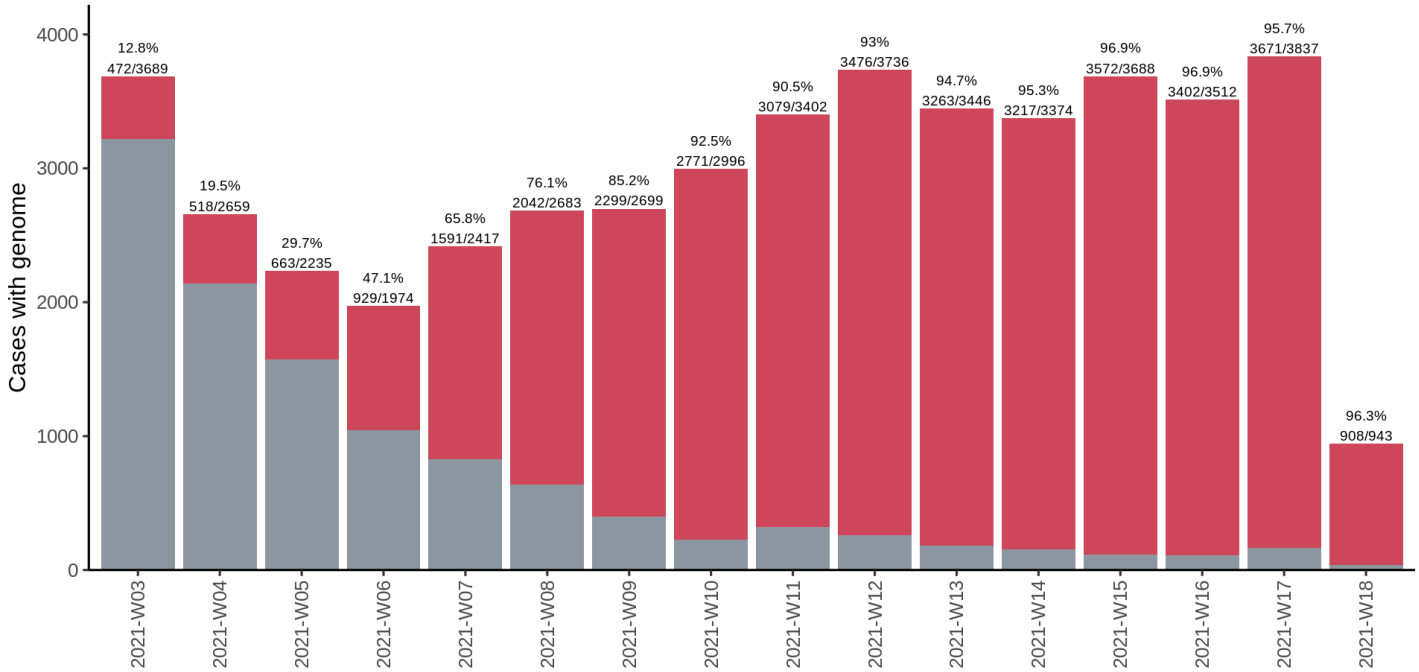
B.1.1.7 B.1.351 P.1 B.1.1.7 + S:E484K B.1.617.2 B.1.525 S:E484K S:N501Y

S:L452R

Variant of Concern (VOC). First reported in the UK, read more about the B.1.1.7 lineage here (https://virological.org/t/preliminary-genomic-characterisation-of-an-emergent-sars-cov-2-lineage-in-the-uk-defined-by-a-novel-set-of-spike-mutations/563).

First observed: 2020-W46
Last observed: 2021-W18
Total cases: 36551/92433 (39.5%)

Whole Denmark Hovedstaden Midtjylland Nordjylland Sjælland Syddanmark



Genome coverage - table

The number of cases with a genome of sufficient quality relative to the total number of cases separated by "/" for each week (ISO standard) and region. The column **Denmark (Sequenced)** is the total number of cases sequenced including those that failed to produce a genome of sufficient quality.
